TakeTheFloor

See who held the floor, who got cut off, and whose ideas got credited to someone else — then coach the next sentence.

Leadership is won or lost in meetings

Uneven airtime

In mixed groups, women's share of speaking time often falls below their share of seats unless group rules change.

Karpowitz, Mendelberg & Shaker, APSR 2012

Who gets cut off

Experimental work found people interrupted women more often than men.

Hancock & Rubin, JLSP 2015

Credit goes missing

Someone repeats your idea and gets the credit. White House staffers fought back with “amplification”.

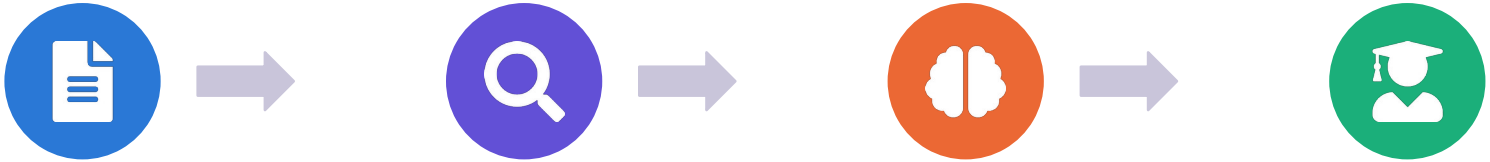

Washington Post, 2016

The moment TakeTheFloor catches

01:29 Aisha	*“What if we launch a student tier at half the price of the pro plan, verified with a student email…”*	**Mark cuts her off: “Let's not overcomplicate it.”**
03:29 Mark	*“What if we did a discounted tier for students, verified with a student email, priced at half the pro plan?”*	**Same idea, two minutes later.**
03:40 Daniel	*“Great idea, Mark.” … “Let's go with Mark's pricing plan.”*	**Credit goes to the wrong person.**

Synthetic demo meeting — all people are fictional.

From transcript to coaching in seconds

1 Drop in a transcript

Zoom/Teams/Meet .vtt, Otter, or plain “Name: text”.

2 Transparent detectors

Airtime, cut-offs & overlaps, Hedge Index, idea-credit tracking — every flag shows the quotes.

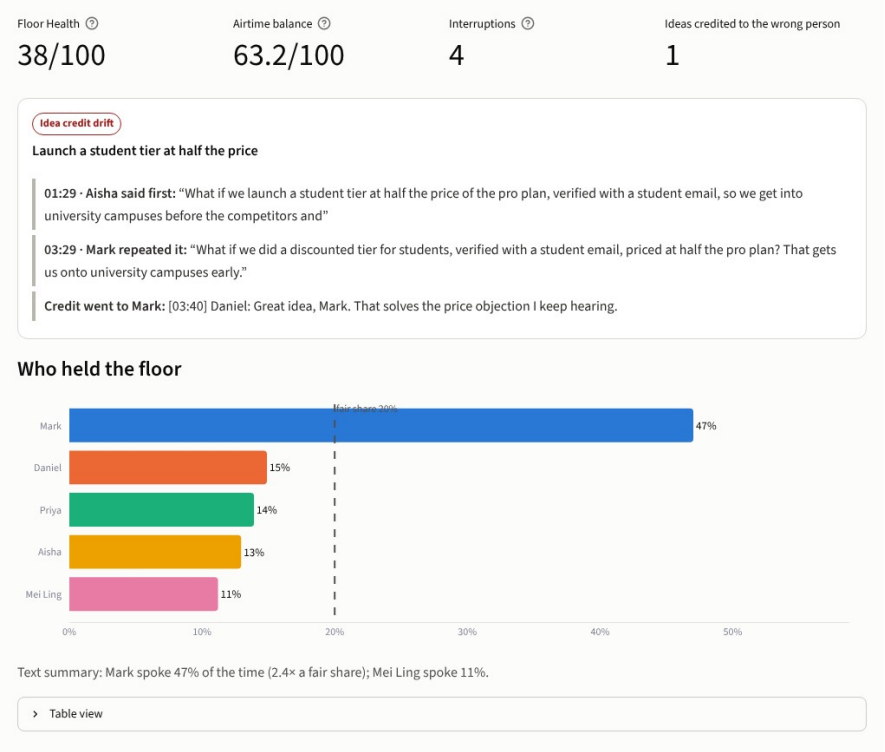

3 Gemma judges context

Tells interruptions from “mm-hmm” and “yes, and…”, titles ideas, writes the recap.

4 Private coaching

Strengths, next moves, word-for-word scripts and rewrites of your own hedged sentences.

Live demo: the dashboard

38/100

Floor Health for the product-launch meeting (healthy stand-up scores 86)

47%

of airtime held by one person — 2.3× a fair share

4

real interruptions — the "mm-hmm" and the "yes, and…" are not counted

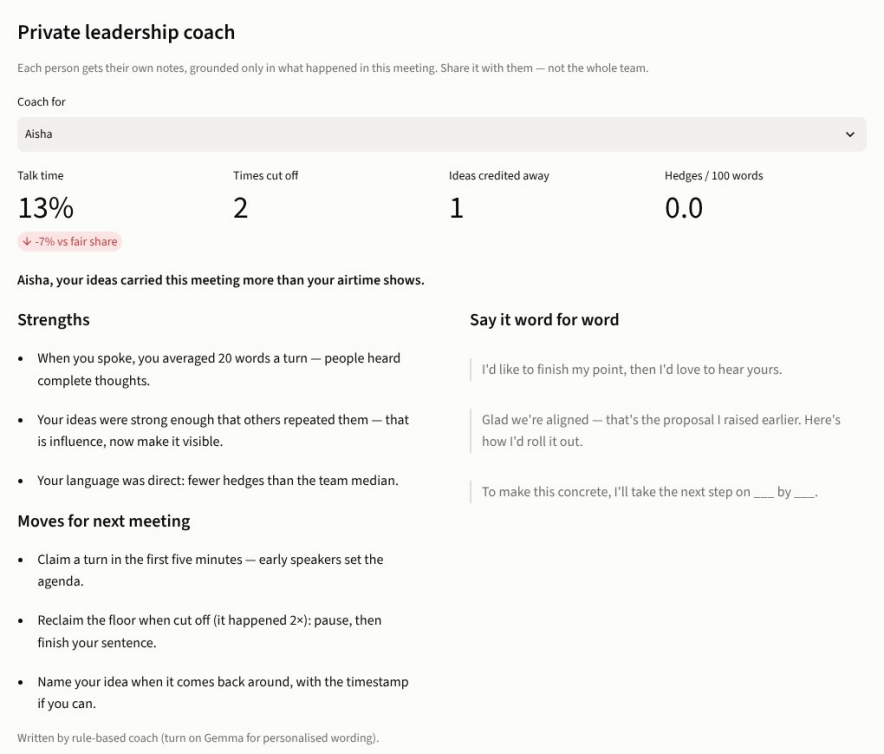

Coaching that turns data into leadership

Private by design
Each person gets their own notes — never a public ranking.

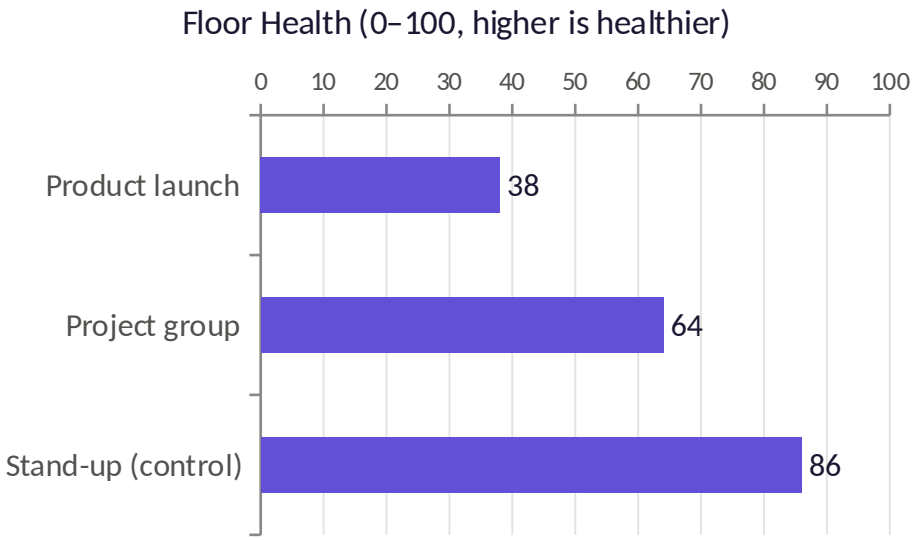

Grounded in evidence
Every strength and move cites what happened in this meeting.

Words you can use tomorrow
“I'd like to finish my point, then I'd love to hear yours.”

Facilitator tips too
Round-robins, a “let them land” norm, naming idea owners in notes.

Validated against labelled meetings

5 / 5
planted interruptions found

4 / 4
idea-credit events found

0
false alarms, incl. the healthy control

0.20–0.70
stable similarity range (sensitivity sweep)

Honest scope: three synthetic, hand-labelled meetings test that the detectors behave as designed — not real-world accuracy. Full method, sensitivity analysis and limitations are in the Kaggle notebook.

Accessible by design, not by checkbox

Plain-language recap

Decisions, owners and open questions for Deaf/HoH, neurodivergent and second-language teammates.

Readable everywhere

Atkinson Hyperlegible font, larger text and high-contrast modes.

Never colour-alone

Colour-blind-safe palette, names on every chart, text summaries and table views.

Safe to share

One-click anonymised names; captions tab writes every event out in words.

Responsible by default, ready to grow

Ethics & privacy

Rules-only or local Gemma (Ollama): transcripts stay on-device

Describes one meeting, never grades a person

Overlap norms differ by culture — every flag shows evidence

What's next

Validate on the AMI Meeting Corpus and real team meetings

Live mode: nudge the facilitator during the call

“Amplify” button: credit a colleague's idea in one tap

Make the invisible visible

TakeTheFloor helps every voice get heard — and get the credit.
